Red Enhances Men's Attraction To Women, Psychological Study Reveals

*Date:* October 28, 2008

*Source:* University of Rochester

*Summary:* Psychologists have added color -- literally and figuratively -- to the age-old question of what attracts men to women. Psychologists have demonstrated that the color red makes men feel more amorous toward women. And men are unaware of the role the color plays in their attraction.

Sex more likely during women’s fertile phase

Women are significantly more likely to have sex during the fertile part of their monthly cycle, suggests new research.

“If you’re a couple trying to get pregnant, that’s great news. There’s a hidden biological process working in your favour,” says Allen Wilcox, a reproductive epidemiologist at the US National Institute of Environmental Health Sciences in Durham, North Carolina, and lead researcher of the study.
